# Welcome to THRIFT STORE

- The thrift store app is basically an application to sell and buy pre-owned or second hand products. This app acts as a mediator to buy or sell used goods by creating, editing or monitoring your listings.
- A seller can put in the details of the items he/she want to sell.
- A buyer, can look for items by searching through the category or available in your preferred locations.

# **FUNCTIONALITIES**

- Admin Control
- Authentication
- Adding the listing by the Seller
- Searching the Product
- Add to cart
- Purchase and make payment
- Delivery Service

## **ADVANCEMENTS**

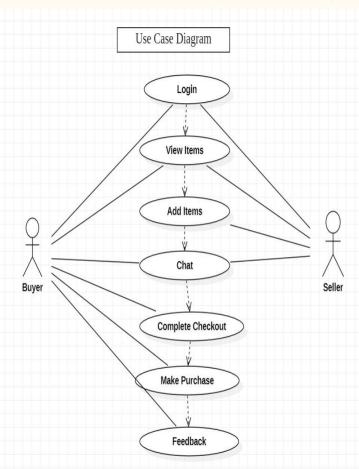

#### ITERATION 1

- Open Chat / Discussion
- Shopping cart
- Seller's Listing

#### ITERATION 2

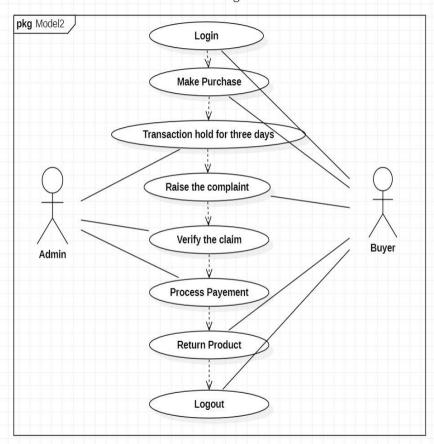

- Subscription
- Trust policy
- Follow seller

#### **USE CASE DIAGRAM (ITERATION 1)**

#### **USE CASE DIAGRAM (ITERATION 2)**

Use case diagram

### REQUIREMENTS

- 1. User needs to Register.
- 2. User needs to Login.
- 3. User needs to opt for subscription plan.
- 4. User needs to add item listings.
- 5. User can view items.
- 6. Users can chat with other users regarding items.
- 7. Users will get push notifications
- 8. User needs to add item to shopping cart
- 9. User can opt for delivery service
- 10. User needs to make payment
- 11. Trust policy.
- 12. Feedback.
- 13. Follow option.

### USE CASES

UC1: Register

UC2: Login

UC3: Add Items

UC4: View Items

UC5: Open chat

UC6: Push Notifications

UC7: Add to wishlist

UC8: Make Purchase

UC9: Complete checkout.

UC10: Feedback

UC11: Logout

UC12: Trust Policy

UC13: Follow option.

# TRACEABILITY MATRIX

	Register	Login	Subscription Plan	Add new item listings	View items	View seller's listing page	Open chat	Push notifications	Adding items to shopping cart	Delivery service	Make payment and checkout	Trust policy	Feedback	Follow option

#### PLANNING, RESOURCE ALLOCATION AND COST ESTIMATION

Story points		<u>lue points</u>	
377	Trust policy	2	
233	Subscription	1	
144	Open chat	8	• We have used Agile cost estimates
89	Delivery service	13	provided detailed estimates for for overall project.
55	Make payment	21	F. J.
34	Search Item	89	<ul> <li>Story points - abstract unit of developers</li> </ul>
21	Add listing	144	Value Points How important
13	Display most searched	233	Value Points - How important
8	Seller's listing page	5	• Bang for the buck score - ratio
5	Modify search based on priority	55	• Velocity - Total no.of story poi
3	Add to cart	34	
2	Feedback	3	
1	Follow seller	1	
1	Register, Login , Logout	377	

- nation technique for our project where we have r short-term planning and high level estimation
- time. Relative time estimation. Estimated by
- the functionality is. Estimated by customers.
- o of value points to story points.
- oints completed in each iteration.

### PROCESS AND METHODOLOGY

- We have used incremental development process as a part of agile methodology
- We Manage workload
- Delegate tasks
- Identify clear workflows
- Develop clear goals
- Provide positive reinforcement

#### QUALITY ASSURANCE

- Track And Visualise Coding Activities
- Analyse Source code Quality
- Quality factors
- Monitor Application Performance

### CHALLENGES FACED DURING OUR PROJECT

- Prioritizing the functionalities based on the bang of the buck score, in iteration 1 we had to add subscription functionality but according to the client requirement we had to implement open chat functionality and push subscription functionality to Iteration 1.
- We faced challenges in analyzing the quality of the code so we implemented sonarqube tool to ensure the software quality.
